More about me: <https://artemchik16.github.io/>

Reside in: Karaganda

Citizenship: Kazakhstan, work permit at: Kazakhstan, Russia

Ready to relocate: Kazakhstan, Russia, Tashkent, ready for business trips

Desired position and salary

Software Engineer/Full-stack Developer

Specializations:

— Programmer, developer

Employment type: full time, work placement

Work format: remote, hybrid

Desired travel time to work: any

Work experience — 3 years 10 months

August 2022 —
May 2026
3 years 10 months

YAEM QR - Full-Stack Developer & Technical Co-Founder

Karaganda, online-menu.org/

IT, System Integration, Internet

• Software Development

Fullstack-разработчик

SaaS digital menu platform for HoReCa (FoodTech)

- Architected and built the entire platform solo: multi-tenant Django/DRF backend, PostgreSQL schema, Redis caching layer, Celery async task processing

- Built deep iiko POS integration end-to-end: menu sync and automatic updates from iiko, order submission to kitchen, and table reservation push to the POS system - full bidirectional data flow, cutting table service time by 30%

- Implemented dual payment systems: customer-facing payments for in-restaurant QR orders, and owner-facing subscription billing with recurring and one-time payment flows (Freedom Pay, Woopay) with transaction resilience and idempotency handling

- Built a full-featured restaurant owner dashboard: menu management, order tracking, subscription billing, and payment management - complete self-serve control panel eliminating support dependency

- Designed the full UI/UX from scratch using an AI-first design approach - built and iterated the entire interface without a dedicated designer

- Built a React frontend for the customer-facing digital menu — mobile-first, QR-optimised, supporting multi-language menus

- Set up Docker, Docker Compose, and GitHub Actions CI/CD pipelines achieving zero-downtime

deployments with no manual intervention

- Scaled platform to 1M+ unique visitors without infrastructure degradation or on-call incidents
- Built AI-powered menu import: owners upload a photo, PDF, or .docx — system parses and structures the full menu automatically, cutting client onboarding from hours to minutes
- Implemented AI-driven menu translation module: automatic localisation of all menu content across multiple languages with no manual re-entry
- Integrated Yandex Metrica for per-restaurant analytics; built an AI module that processes traffic and sales data to generate personalised menu optimisation recommendations for owners
- Integrated (S3-compatible) object storage for media assets; built support for photos, videos, and 3D models per dish - rich media menu experience without CDN overhead
- Developed a Telegram bot: owner authentication, automated statistics delivery on schedule, broadcast notifications to restaurant staff
- Configured SEO, GEO (local search), and AEO (answer engine optimisation) — structured data markup, meta layers, and content optimisation for restaurant discovery across search and AI-powered engines
- Launched a partner/affiliate programme: tiered commission model (30/40/50%), outreach copy, and partner acquisition strategy targeting HoReCa distributors and POS dealers

Stack: Python · Django · DRF · PostgreSQL · Redis · Celery · React · JavaScript · Docker · Docker Compose · GitHub Actions · CI/CD · iiko API · Freedom Pay · Woopay · AI/LLM · Yandex Metrica

YAEM TIPS - Full-Stack Developer & Technical Co-Founder

Karaganda, online-tips.org/

IT, System Integration, Internet

- Software Development

Fullstack-разработчик

Cashless tipping fintech service - integrated with YAEM QR (part-time, concurrent with YAEM QR)

- Designed and built the full product from scratch as the sole engineer, parallel to active development on YAEM QR
- Built the complete tipping flow: customer scans a staff member's personal QR code → enters card details on a dedicated payment page → tip is processed and credited to the employee account via Woopay acquiring
- Implemented personal QR code generation per employee — downloadable and printable, tied to their account
- Built a staff personal dashboard: transaction history, balance tracking, and funds withdrawal flow with Woopay compliance
- Developed real-time Telegram bot notifications for staff: tip received, withdrawal initiated, withdrawal completed
- Integrated YAEM TIPS into YAEM QR as a seamless module: restaurant owners manage their staff directly from the YAEM QR dashboard — add, edit, remove employees, view tipping activity per person

- Architected a secure microtransaction flow with transaction resilience and financial data integrity throughout the acquiring chain

- Set up Docker, Docker Compose, and GitHub Actions CI/CD pipeline - consistent with YAEM QR infrastructure, zero-downtime deployments

Stack: Python · Django · DRF · PostgreSQL · React · Woopay · Telegram Bot API · Docker · Docker Compose · GitHub Actions

Fullstack-разработчик

LegalTech marketplace connecting clients with lawyers in Kazakhstan (contract, concurrent with YAEM QR)

- Designed and built the platform architecture from scratch as the sole developer on the project: client-lawyer matching engine, profile and search systems, communication layer

- Built the full Django/DRF backend and PostgreSQL schema end-to-end: API design, database modelling, third-party service integrations

- Developed complete frontend pages in React/JS - not isolated components, full user-facing screens from scratch

- Built a Telegram bot from scratch on aiogram + SQLAlchemy with AI-powered contract analysis - automated document review flow for legal clients, LLM integration for clause extraction and risk flagging

Stack: Python · Django · DRF · PostgreSQL · React · aiogram · SQLAlchemy · Telegram Bot API · Docker · LLM integration

IT, System Integration, Internet

- Software Development

Fullstack-разработчик

Software agency - multiple product verticals, solo and team projects

TheGame (Fintech/EdTech - investment education gaming platform, 1M+ sessions, 50K active users)

- Worked in a team of 3 engineers with modular architecture approach
- Built Telegram Web App (TWA) authentication system from scratch
- Identified and fixed a critical security vulnerability: chat ID substitution exploit allowing full access to another user's profile data
- Configured market data APIs: stock exchanges, crypto, metals — real-time price feeds for the platform
- Developed frontend using Django template-based server-side rendering

AiFit (HealthTech/AI - women's fitness marathon platform, 30K+ users)

- Joined a large existing codebase; built new feature modules on top of the established core architecture
- Implemented additional functionality for AI-based training and nutrition personalisation flows

Custom Projects (client work)

- AI Task Tracker: built from scratch - LLM-based task management system automating resource prioritisation and allocation for the client
- Personal Matrix Generator: extended existing system - calculation service generating personalised life-path charts from date of birth, custom algorithm engine, automated report generation, web interface

Stack: Python · Django · DRF · PostgreSQL · MySQL · Telegram Bot API · Telegram Web App · AI/LLM integrations

About me

Full-stack developer with 3+ years of production experience, including co-founding and shipping two SaaS products from zero to scale as the sole engineer. Built multi-tenant Django/DRF backends, React frontends, payment integrations, real-time systems, and CI/CD pipelines end-to-end - without a team, without hand-holding. Comfortable owning the full vertical: architecture decisions, implementation, deployment, and post-launch iteration. Now looking for a remote full-stack or backend-heavy role where deep technical ownership still matters.
